Artificial Intelligence and Machine Learning

Artificial Intelligence enables computers to perform tasks that normally require human intelligence.

Machine Learning is a subset of Artificial Intelligence. It allows computers to learn patterns from data.

Supervised Learning uses labelled data for training.

Unsupervised Learning discovers hidden patterns in unlabelled data.

Python is widely used in Artificial Intelligence and Machine Learning.

ChromaDB is a vector database used to store and retrieve document embeddings.

Ollama allows users to run large language models locally.
