Artificial Intelligence and Machine Learning

Machine Learning is a branch of Artificial Intelligence.

It allows computers to learn patterns from data.

Deep Learning uses neural networks with multiple layers.

Python is widely used for Machine Learning applications.

Natural Language Processing helps computers understand human language.

Data Science uses statistics and programming to extract insights.

Retrieval Augmented Generation (RAG) combines information retrieval with language models.

ChromaDB stores vector embeddings and supports semantic similarity search.

Ollama allows users to run large language models locally.
